Finding the Code Number

There are normally three ways to identify a Lincoln Electric welder:

1. Product Number – letter "K" or "U" followed by numbers and/or letters. For example: K2175-1
2. Code Number – 4 to 5 digit number. For example: 10859
3. Serial Number – 11 digit alphanumeric. For example: U1060512345

When you use Service Navigator at lincolnelectric.com, you need to enter the code number of the welder. A common mistake is to enter the product number.

The code number can be found on the nameplate of the welder, located either on the front or back of the unit.

All line art is not drawn to scale.

Part numbers beginning with a "KP" are considered "expendable" parts. Expendable parts may be available individually or in bulk packages, depending upon the specific part. KP parts that are bulk packaged are identified with a "B" suffix on the end of the base part number (e.g. KP2010-1B1).

Please note that many of the parts that are bulk packaged are only available for purchase in these bulk quantities. Parts that are only available in bulk packages are identified with an asterisk (*) and must be ordered in multiples of the "Order Quantity Multiples" number shown in the list (e.g. 10).

What You Need To Get Started

Along with your Pro-Torch TIG torch, you may need to purchase the following accessories to begin welding:

TIG Torch Connection Adapter

A variety of adapters exist to connect to a variety of output terminals such as 1/2 in. (12.7 mm) studs, Twist-Mate output terminals and Precision TIG-style connectors.

Tungsten Electrode

Your welding supplier can provide you with the proper electrode for your application. Use the Tungsten Electrode chart, as a guide for ordering the appropriate tungsten.

Expendables

Parts Kits

Parts Kits conveniently provide all the torch accessories you need to start welding. Parts Kits provide collets, collet bodies, a back cap, alumina nozzles and tungstens in a variety of sizes, all packaged in an easy to carry reclosable box.

Collets

These hold the tungsten firmly in your torch. They are purchased according to the tungsten size and must be used with the proper corresponding collet bodies, or gas lens collet bodies.

Collet Bodies and Gas Lens Collet Bodies

Collet bodies hold the collet and tungsten in place. Gas lens collet bodies are used in conjunction with gas lenses when precise control of shielding gas flow is required.

Alumina Nozzles

These nozzles, made of high temperature ceramic material, protect the collet body and direct the gas flow to the weld. Choose them according to the chart on this page 7, for your specific application.

Back Cap

Each torch comes with one back cap which is sufficient for most applications. PTA-9 and PTW-20 torches include a medium back cap. PTA-17, PTA-26 and PTW-18 torches include a long back cap. The 20H-320-25R includes a medium back cap. However, optional longer or shorter back caps are available for each torch.

TIG Torch Connection Adapters

These adapters connect the TIG torch cables to the power source. May be required for certain torches.

Drive Rolls

Use the table to locate the letter reference code for a particular Wire Feed Welder or Wire Feeder's drive system. Turn to the page with that letter code to identify replacement kits and parts that are available for that wire drive system. Pay special attention to the overall rating of the specific machine. Do not exceed the machine's ratings (wire, type, wire size, and welding amperage).

- **Do not exceed the wire sizes and types recommended for use with your welder.**
- **Do not exceed the welding output rating of your machine.**
